Budapest, Hungary

SUMMARY

Final-year Computer Science student at ELTE Budapest, working as a data analyst at a global beauty multinational and a research assistant in numerical analysis. Builds enterprise BI models and Python automation, and ships tested, CI-backed web and LLM agent projects.

SKILLS

Languages	Python · SQL · TypeScript / JavaScript · PHP · Java · Bash / PowerShell
Data & BI	pandas · PySpark · Databricks · ETL design · star-schema modeling · Power BI (DAX, Power Query) · Power Automate · Office Scripts
ML & Web	CNNs · FISTA-Net · signal processing · Laravel 13 · React 19 · REST API design · Tailwind CSS
Tools	PostgreSQL · MySQL · SQLite · Git · GitHub Actions · Docker · pytest · AWS · Azure AD · Upland PSA

EXPERIENCE

Data Analyst Intern, The Estée Lauder Companies Inc. – Budapest, Hungary June 2025 – Present

- Built a vendor-closing and savings-tracking solution that turned scattered Excel files into a production Power BI star-schema model with vendor, payment-term, and fiscal-calendar dimensions
- Designed Power Query transformations with multi-level fallback matching and slicer-stable DAX measures, powering a Vendor Group to Tower to Vendor drill-down
- Automated 16+ reporting and governance processes with Power Automate, Office Scripts, and Python, saving 100+ hours a month
- Cleansed and restructured 100,000+ records in Python, resolving mismatches, duplicates, and missing values that had corrupted reporting
- Administered Upland PSA for a global user base, triaging 600+ IT tickets and managing Azure AD access groups
- Partnered with stakeholders across global offices to align data outputs and reporting cadence across time zones

Research Assistant, Numerical Analysis Modeling Lab, Eötvös Loránd University June 2026 – Present

- Reproduced ECG baseline wander removal experiments from an EMBC 2025 paper on sparse dictionary learning neural networks against the PhysioNet Challenge 2020 dataset
- Benchmarked CNN, Quadratic Programming, FISTA, and FISTA-Net under the paper's evaluation protocol, assessing which methods best preserve clinically relevant ECG morphology

Teaching Assistant – Discrete Mathematics, Computer Systems, Eötvös Loránd University Sept 2025 – Present

- Tutor undergraduates in logic, combinatorics, and graph theory, and lead Linux, Bash, and PowerShell labs with hands-on scripting exercises

PROJECTS

preflight-agent — Python · LLM orchestration · pytest · GitHub Actions · Vercel

- Built a briefing layer that runs ahead of a coding agent: scans the repository at zero token cost, sizes the task, then escalates to an expensive model only on failure — 5/5 fix rate at 32% lower cost than the frontier model alone

Tracky — Laravel 13 · React 19 · TypeScript · TanStack Query · Cypress

- Built a full-stack analytics platform where one metric type column drives the logging input, chart types, and summary maths; enforced owner-scoped access at 3 server-side layers, covered by 50 PHPUnit tests

Qgate-Agent (in development) — Python · LangGraph · Kafka · Postgres · Docker

- Designing a human-in-the-loop manufacturing quality agent that correlates end-of-line test failures against build genealogy to propose a containment window, every tool read-only behind a human approval gate

EDUCATION

B.Sc Computer Science, ELTE Budapest · CGPA 4.58 / 5.0 · Stipendium Hungaricum Scholar Expected Jan 2027

Coursework: Algorithms and Data Structures, Database Systems, Machine Learning, Operating Systems
